Testing Environment:

Browser: Google Chrome (Version 157.0.0.0)

Operating System: Windows 11

Application name - Conduit

Tested Application URL - https://ember-realworld-app.netlify.app/

Testing Type: Manual Functional Testing and UI/UX Testing

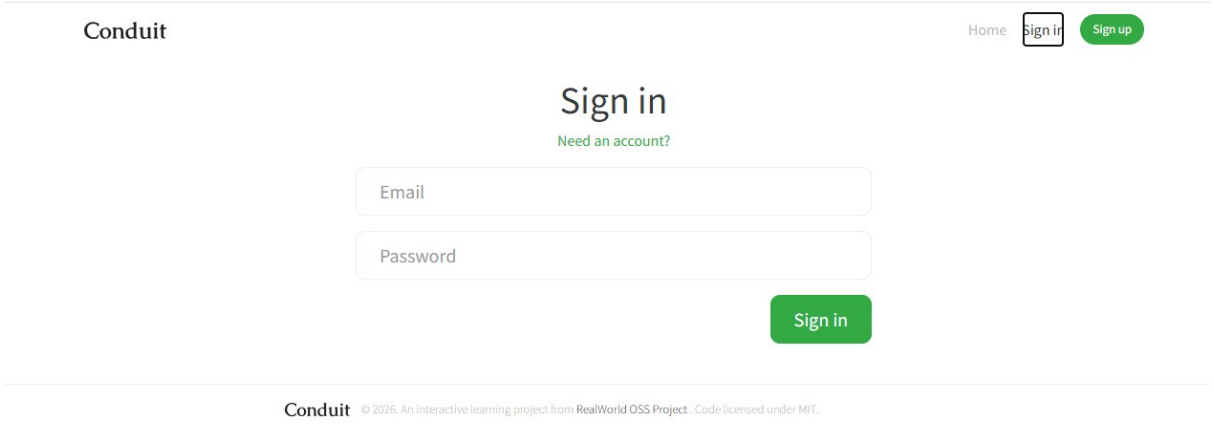

#	Title/Summary
1	Missing active page css for the "Sign in" navigation link.
2	Post-registration flow fails to redirect user to Sign In page or Dashboard.
3	Article edit screen clears existing tags and forces manual re-entry.
4	Profile picture input state is cleared on submit, causing a backend validation crash.

Tags fail to display under a newly
5 published article on the global feed

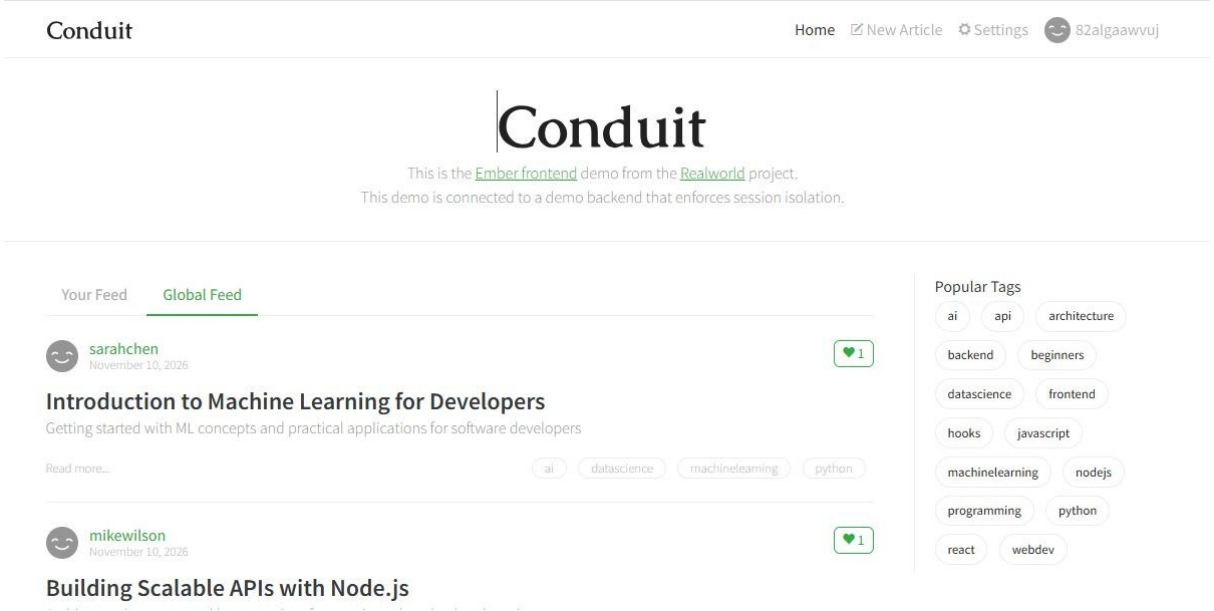

Expected Result	Actual Result
The active navigation option should have css like (a colored underline/highlight box with correct margin) to distinguish it from other links.	The link lacks any active highlight border, or margin indication, making it visually identical to the inactive "Home" link.
The application redirects the user to the Sign In page (to log in manually) or directly to the Home dashboard as an authenticated user.	The page does not transition or redirect to the login interface, failing to prompt the user for their new credentials to establish a clean session.
(Title, Description, Body, and Tags) load with their existing data pre-filled.	The tags section is completely blank, All fields requiring the user to re-type all tags before saving edits.
The application saves the profile image link successfully and updates the page profile thumbnail.	The URL text field instantly empties out, the data fails to save, and the raw backend The constraint message image is a string of less than 200 chars is displayed.
The tags associated with the article should render clearly underneath the description text (matching standard articles).	The tags section is completely blank for the newly published article, while other global feed articles display tags correctly.
